This is a tutorial to show you how to make a barn type roof.

1st step we will start out making a building of an even number of tiles such as 12 x 10 or 12 x 12.
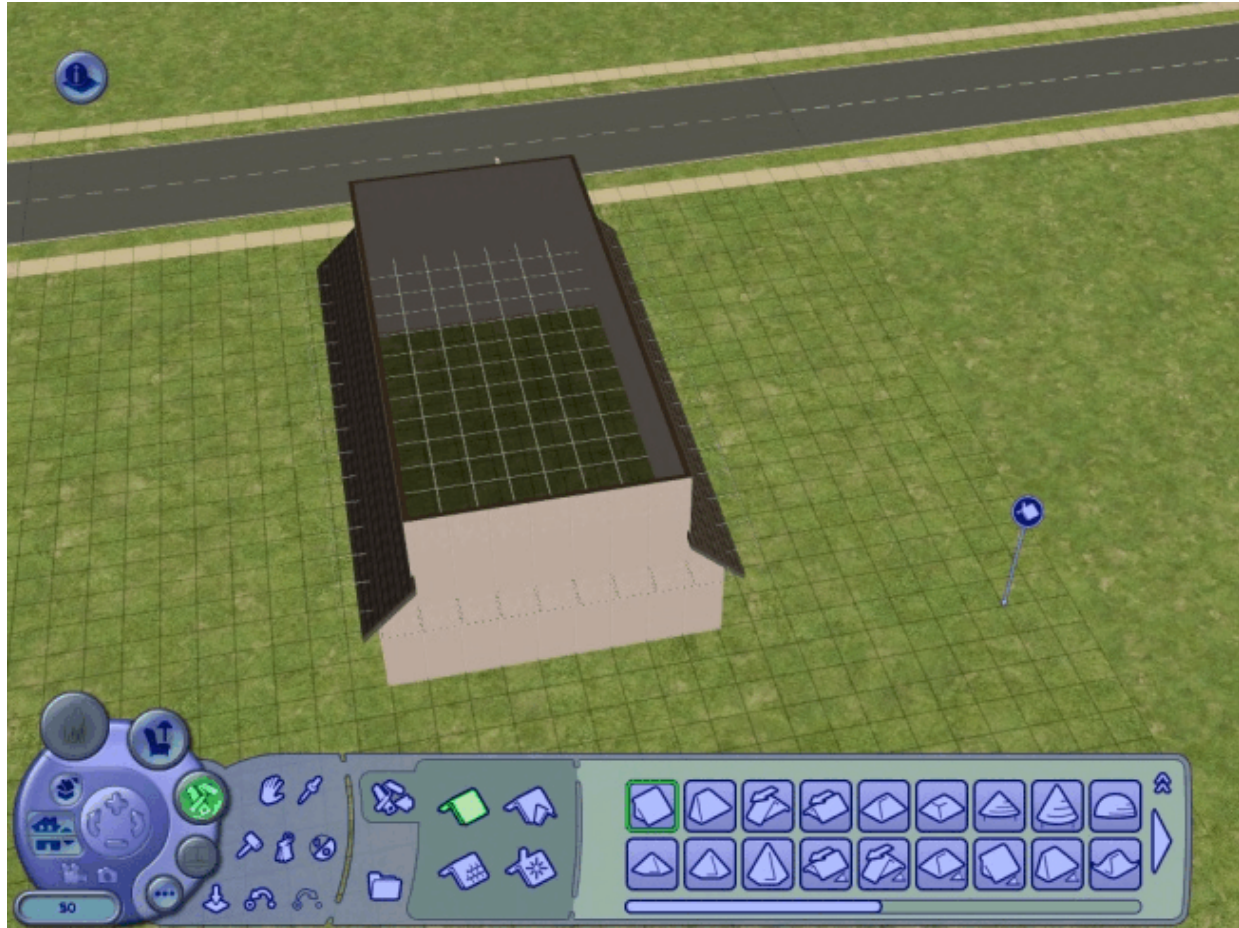

Next step we will add the second story. This time you will want to come in one tile square on each side but not on the front of your barn.

Now we will add our roof for the first floor. Note the Roof type I chose at the bottom of the photo.
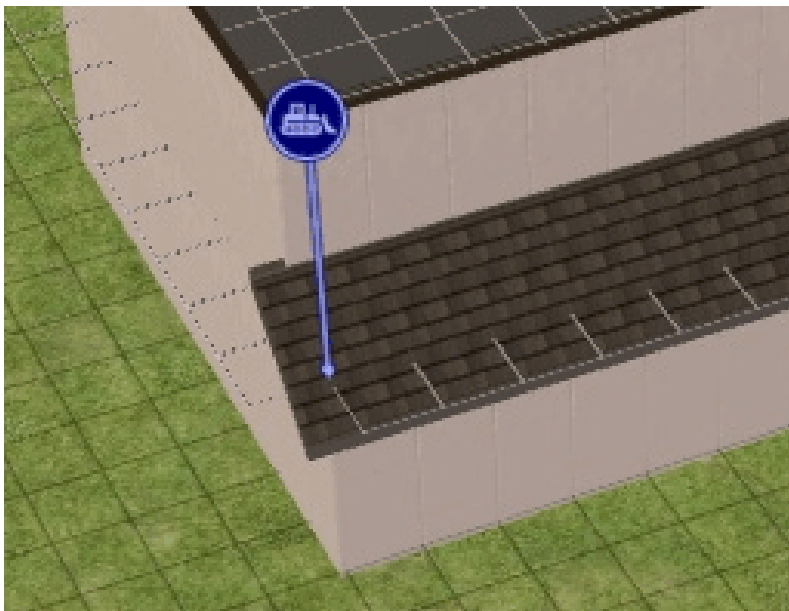

Now time for the cheat code. You are going to type this in exactly as shown in the photo below:

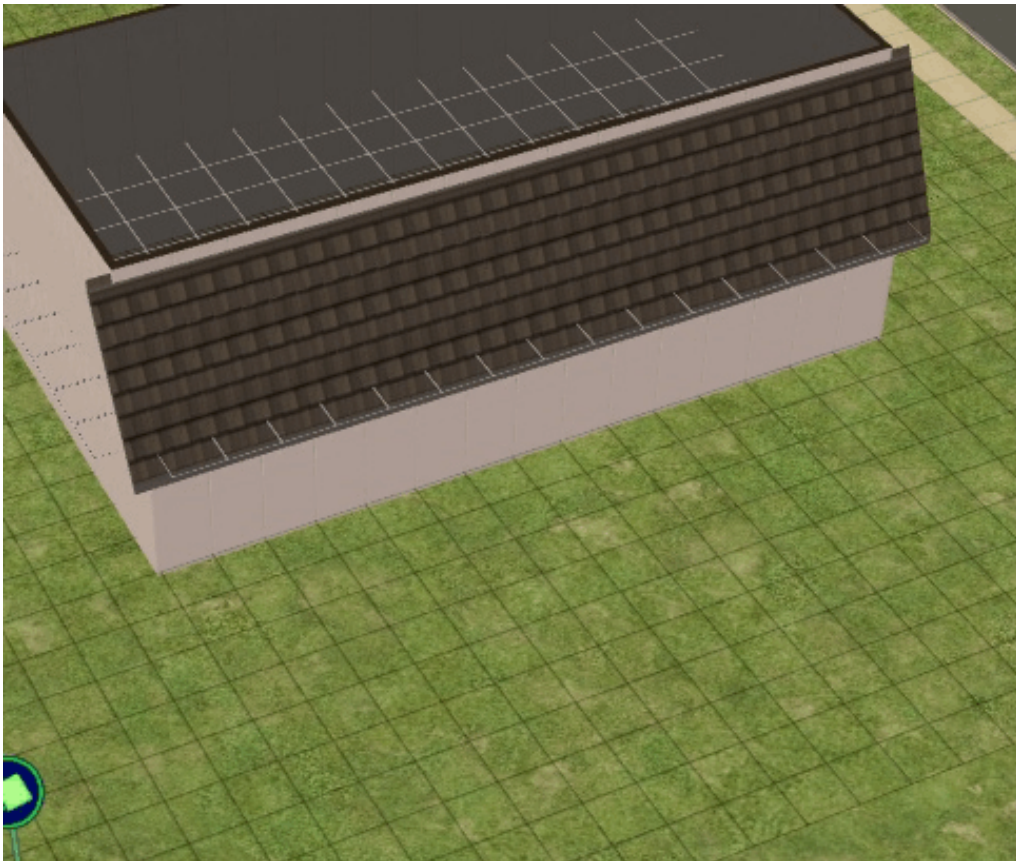

```
IndividualRoofSlopeAngle 65
```

You will not notice any change until the next step. We are going to press now ctrl+alt and not let go.

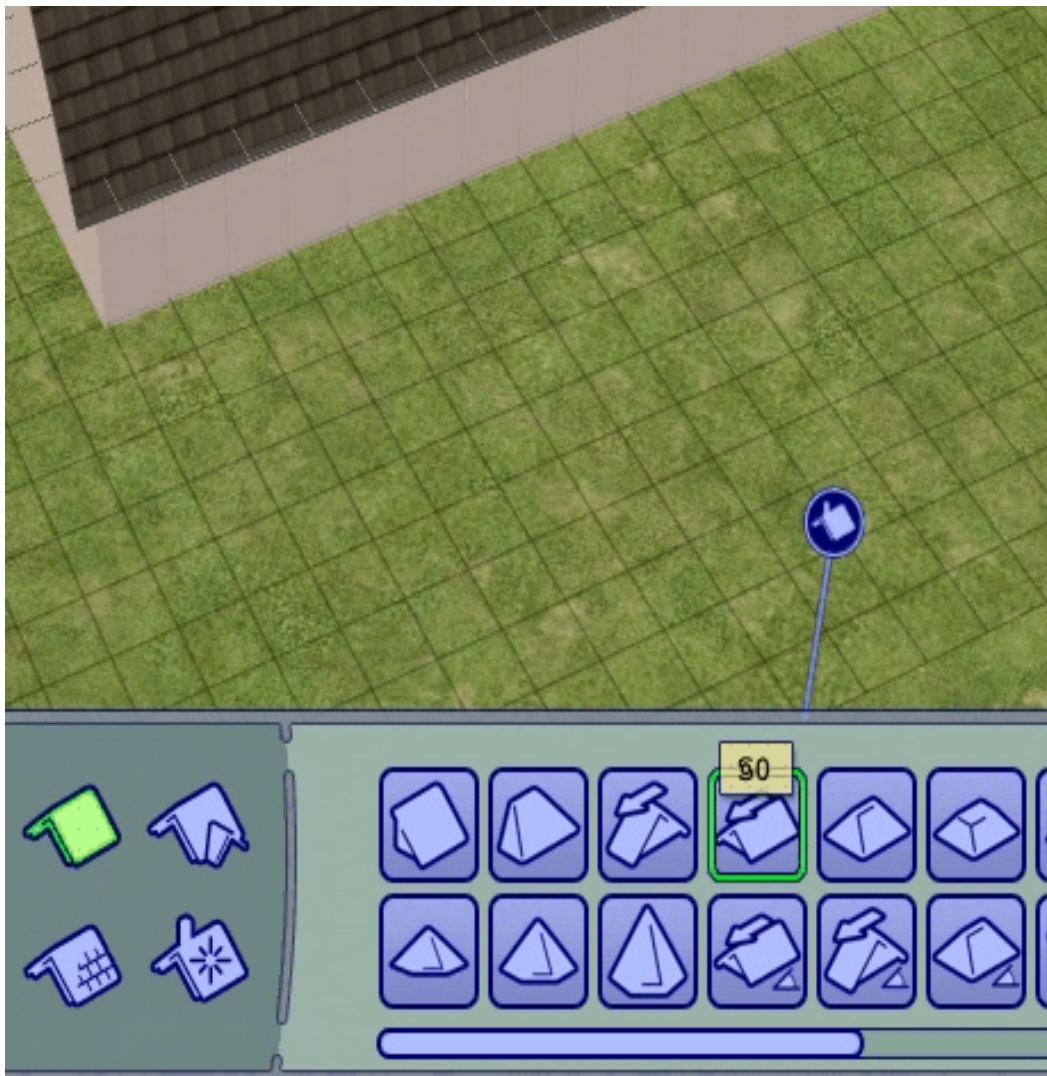

Now click on both roofs that you just placed on your barn. Note the bulldozer icon this is normal.

You should end up with a roof line that looks like this:

Now we will repeat these steps for the upper roof only this time choosing this roof type:
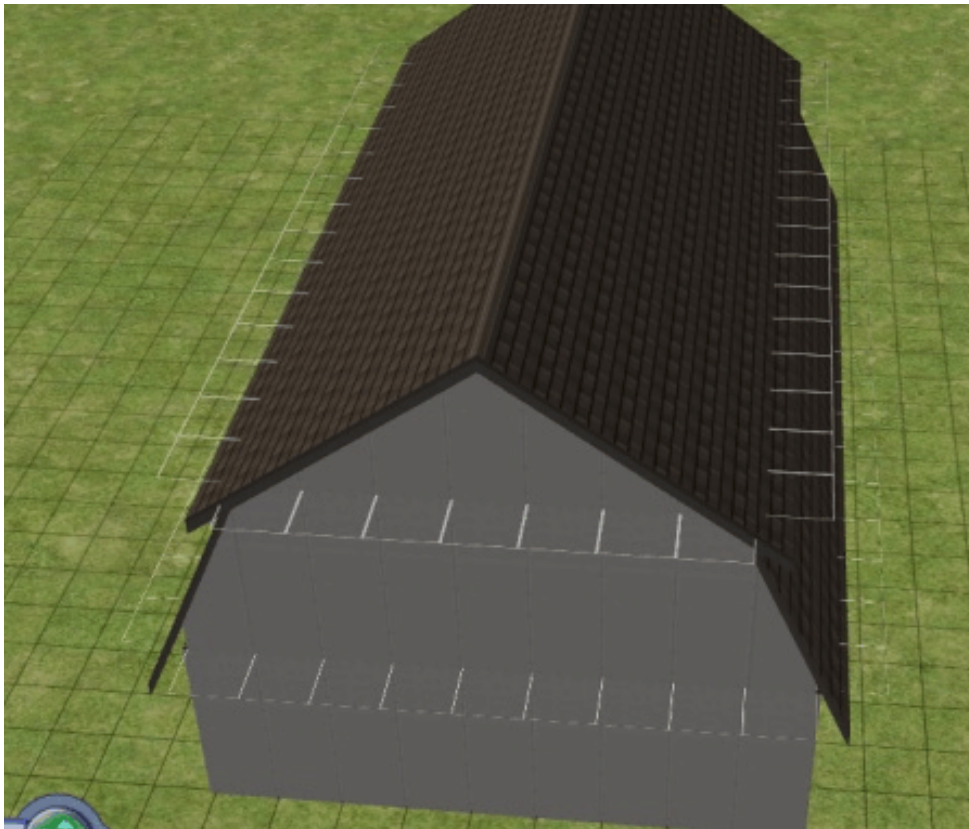

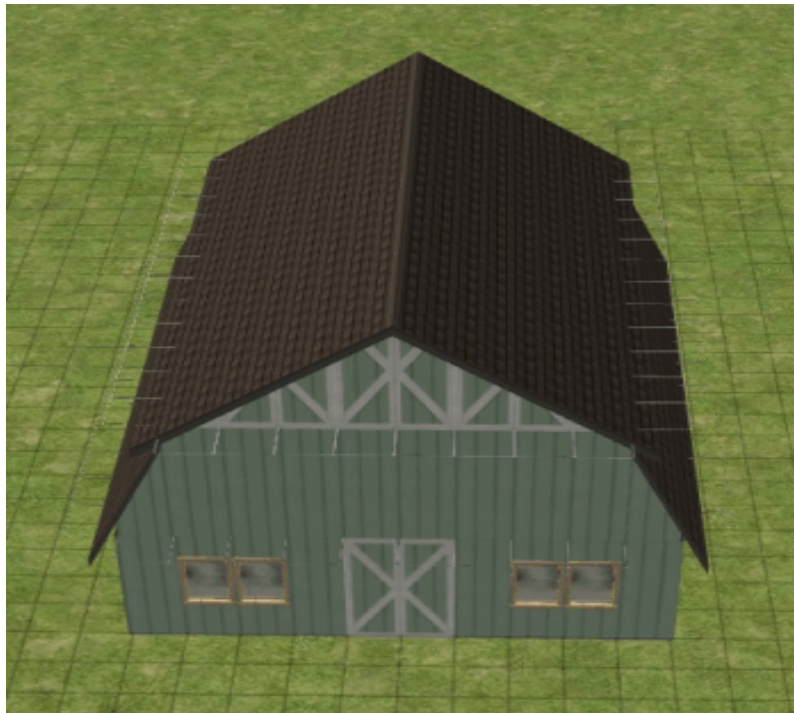

Now the cheat code we will be entering for the upper roof is:

IndividualRoofSlopeAngle 35

You will repeat the ctrl+alt and click on that roof line now and you should have a barn that look like this:

Now just decorate it with barn walls and windows and you will now have something that looks like this:

You can go crazy with these barns and make all different kinds of combinations. That is how I made this barn:
